Q: Number Theory: Divide Primes by a Constant? Say I have two lists of numbers, e.g. List 1 = { 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11,
12, 13, 14, 15, 16 } and List 2 = { 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17 } Is there a way to have Mathematica
divide the numbers in each list by a value so that they remain both sorted and in proper relative order? For instance List 2 / 5
gives {{1, 2, 3, 4, 5}, {6, 7, 8, 9, 10, 11, 12, 13, 14, 15}, {16, 17}} Edit You can either plot the solutions as a parabola or find
the maximum value of a curve List1 = { 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16 } List2 = { 1, 2, 3, 4, 5, 6, 7, 8, 9, 10,
11, 12, 13, 14, 15, 16, 17 } n = 1; plotList1 = Table[{n, N[Table[List2[[i]]/n, {i, Length[List2]}]}], {n, 1, 10}] List2 = {1, 2, 3,
4, 5, 6, 7, 8, 9, 10 f678ea9f9e
